Summary

Senior Software Engineer with 8+ years of experience designing, building, and operating production-grade backend and full-stack systems. Strong expertise in Python, Node.js, Django, and full-stack development with React and TypeScript, along with cloud-native architectures on AWS using infrastructure as code. Hands-on ownership of REST APIs, databases, CI/CD pipelines, and asynchronous messaging systems using RabbitMQ. Proven ability to lead technical initiatives end-to-end, integrate enterprise-scale third-party services, and deliver reliable, maintainable systems in regulated and data-driven environments.

Experience

Ottawa Memory Clinic

Software Engineer • Ottawa, ON

05/2023 - Present

- Led backend architecture and development of a Django REST platform supporting clinical workflows, authentication, document processing, and data ingestion, applying Test-Driven Development (TDD) for high code quality and maintainability.
- Designed and implemented secure Single Sign-On (SSO) using Microsoft Graph API, integrating enterprise identity and access management.
- Developed backend services with Python and Node.js, and built full-stack features using React and TypeScript integrated with REST APIs.
- Implemented asynchronous processing and inter-service messaging with RabbitMQ, improving reliability and decoupling long-running tasks.
- Owned PostgreSQL data models, migrations, and query optimization to support evolving product and reporting requirements.
- Introduced infrastructure as code using Terraform to manage AWS resources, improving deployment consistency and reducing manual configuration.
- Designed and maintained CI/CD pipelines using GitHub Actions, automating testing, validation, and deployment across environments.
- Built and maintained ETL pipelines in Python using pandas to process structured datasets for analytics and reporting.

Arbache Innovations

Software Engineer • Vitória, ES

01/2019 - 04/2023

- Developed and maintained backend services using Django REST Framework and frontend applications using ReactJS in a multi-application environment.
 - Designed interactive data visualization dashboards using D3.js to support business reporting and analytics.
 - Implemented data synchronization and integration workflows across multiple systems.
 - Led frontend deployment pipelines using AWS S3 and CloudFront, automated via GitHub Actions.
 - Applied TDD practices to backend services to increase test coverage and release confidence.
 - Managed PostgreSQL databases across multiple environments and applications.
-

Skills

Python, Django, ReactJS, Web Development, Software Development, SQL, AWS, JavaScript, TypeScript, Selenium, PostgreSQL, Test Driven Development, Terraform

Education

Algonquin College

Post Grad - Business Intelligence System Infrastructure • Ottawa, ON

08/2023

- Data ETL using python and SQL relational databases for data analytics.
- Using PowerBI and Tableau for data visualization.
- Applying Machine Learning models using python.
- EDA - Exploratory Data Analysis using python and Jupyter notebook tools (also Google Colab).
- Database development and management.
- Python for backend programming
